

Nutritional Support!

At Last There is Hope!

Sportron's Diabetic Pack is nutritionally supporting today's crisis with dramatic results. World renown nutritionist, Dr. W. Alan Tomlinson recently said, "Sportron's Diabetic Pack is the most advanced nutritional support available and has been scientifically developed to intervene and assist in cases of abnormal sugar metabolism."

The Science

There are two reasons why you can have confidence in the Sportron Diabetic Pack:

- The Science
- The Results

One of the main reasons why the Diabetic pack is so effective is because of Sportron's internationally patented technology called FoodMatrix™. FoodMatrix™ is based on the fact that our body recognizes and processes real food and not chemical isolates. Professor J. Vinson from Scranton University said, "FoodMatrix™ nutrients are the most important advancements in nutrition today."

Active ingredients include:

FoodMatrix™ Chromium - contains Chromium as Glucose Tolerance Factor (GTF). GTF is 50 times as effective as other forms of Chromium and 20 times more readily absorbed. Studies indicate the following results:

- Controls blood glucose by promoting uptake by muscles and organs
- Stimulates burning of glucose for energy
- Reduces fat levels in blood
- Controls blood cholesterol levels
- Increases HDL cholesterol
- Reduces arteriosclerosis
- Stimulates production of essential nerve substances
- Increases resistance to infection
- Stimulates protein synthesis
- Suppresses hunger symptoms through brain "satiety center"

Glucosol™ - studies conducted at the Institute of Biomedical Research in Bradenton, Florida conclude the following:

- Lowered blood glucose levels in Type 2 diabetics 31.9% in 30 days
- Improved memory function
- Regained blood glucose balance in Type 2 diabetics
- Weight loss - Subjects lost an average of 4.8 lbs. in 30 days

Omega 3 Fatty Oils - studies conducted at Louisiana State University in Baton Rouge concluded:

- Participants became insulin sensitive after 12 weeks and were able to reduce their dependence on insulin shots

What the Experts Have to Say!

The Sportron Diabetic Pack is the answer for millions of diabetics who want to enjoy a better quality of life. This system is a tested and proven support that will provide dramatic results.

Diabetes

"A National Epidemic"

**Be There For Him
He Needs You.**

At Last...There is Hope for Diabetes Sufferers!

According to researchers at the University of North Carolina at Chapel Hill, "Type 2 diabetes is becoming a national epidemic."

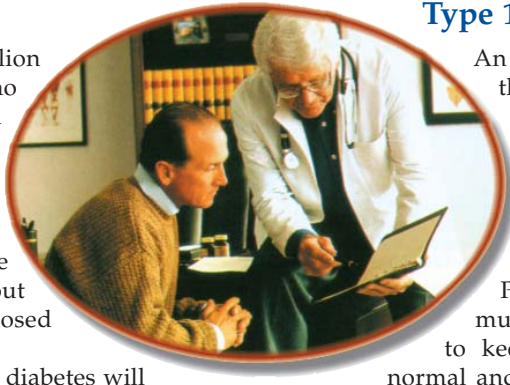

The Facts

There are approximately 16 million people in the United States who have diabetes. While an estimated 11 million have been diagnosed, 5 million people are not aware that they have the disease. Each day approximately 2,200 people are diagnosed with diabetes. About 798,000 people will be diagnosed this year.

Public health experts believe diabetes will be the next great lifestyle disease epidemic to afflict the United States. A study by doctors from the Center for Disease Control and Prevention (CDC) recently startled people with the finding that the prevalence of diagnosed cases of diabetes had increased 33% over the past eight years. Dr. Frank Vinicor, director of the CDC's diabetes division said, "The rates are on an explosive rise. The actual number is surely much higher, since many cases go undiagnosed for years. The most alarming statistic in the CDC study was the breakdown of cases by age. For people in their 40's, the incidence of diabetes increased 40% and for people in their 30's it went up 70% over the eight year period."

Definition

Diabetes is a disease in which the body does not produce or properly use insulin, a hormone that is needed to convert sugar, starches and other food into energy needed for daily life.

Type 1

An autoimmune disease in which the body does not produce any insulin, Type 1 diabetes was once called juvenile-onset diabetes, but that name has been dropped because Type 1 diabetes also strikes young and older adults alike. People with Type 1 diabetes must take daily insulin injections to keep their blood glucose levels normal and to stay alive. Type 1 diabetes accounts for 5-10% of diabetes.

Type 2

Is a metabolic disorder resulting from the body's inability to make enough, or properly use, insulin. It is the most common form of the disease and accounts for 90-95% of diabetes.

Those with Type 2 produce insulin, but the cells in their bodies are "insulin resistant". They don't respond properly to the hormone, so glucose accumulates in their blood. Some people with Type 2 diabetes must inject insulin, but most can control the disease through a combination of weight loss, exercise, diabetes medication, improved nutrition, and nutritional supplementation.

Warning Signs of Type 2 Diabetes

Unfortunately, people with Type 2 diabetes often have no symptoms until the disease has progressed too far. However, the following are warning signs:

Warning Signs

- Frequent urination
- Unusual thirst
- Extreme hunger
- Extreme fatigue
- Irritability
- Frequent infections
- Blurred vision
- Cuts/bruises that are slow to heal
- Tingling/numbness in the hands and feet
- Recurring skin, gum or bladder infections

Complications

- Blindness
- Kidney Disease
- Heart Disease and Stroke
- Nerve Disease and Amputations
- Impotence

What can be done?

Today, most Americans can help protect themselves by changing their daily routine. Although doctors have stated that there is no cure for diabetes, the following is highly recommended:

- Exercise
- Reducing sugar consumption
- Improved nutrition
- Nutritional supplementation

Sportron's Diabetic Pack

Experts all agree that Sportron's Diabetic Pack is the nutritional answer for millions who want to safely and effectively manage Type 2 diabetes.
